Ortho Pharmaceuticals Brochure

Business Groups

Marketed by the Biotech Division in the United States and in over 25 countries by the Johnson & Johnson European affiliate Cilag. ORTHOCLONE OKT³ is used to reverse acute rejection in transplant patients. As many as 1,000 U.S. undergo approximately 1,500 kidney transplants each year for reversing acute rejection. ORTHOCLONE OKT³ is a monoclonal antibody that can be targeted to T-cells while leaving other cells active. By specifically attacking T-cells, ORTHOCLONE OKT³ causes them to self-destruct. Doses of ORTHOCLONE OKT³ produce flu-like symptoms such as chills, fever, shivering, headache, vomiting or tremors. However, these symptoms generally do not occur with later doses. Twenty-four to 36 hours after ORTHOCLONE OKT³ is discontinued, the T-cells reappear and leave no apparent long-term effects on the immune system.

The Biotech Division has established a strong franchise in the field of transplantation with this milestone product which is used in all kidney transplant centers in the United States.

Ortho Pharmaceutical Corporation

Recognizing its contribution to transplant medicine, ORTHOCLONE OKT³ was awarded the 1986 Nephrology Award for advancement in transplantation.

Kidney rejection reversal is only the first application for ORTHOCLONE OKT³. Heart and liver transplant rejection treatments are pending FDA approval. Indications in clinical trials or early research include renal and liver prophylaxis, autoimmune diseases, diabetes, rheumatoid arthritis, multiple sclerosis and myocarditis.

In addition, successor drugs are under development. For example, pre-clinical tests indicate that transplant patients may receive ORTHOCLONE OKT^{3A} as a prophylaxis to prevent rejection. Other antibodies are under active review as licensing candidates or research projects that will help improve the therapy of transplant medicine.

II. Growth Factors

Recombinant DNA technology is the cornerstone of efforts at the Ortho Biotech Division to develop and market a variety of growth factors such as hematopoietic factors. Produced naturally by the body, these hematopoietic substances promote the growth of specific cells.

Biotechnological efforts to reproduce these crucial blood factors impact a variety of medical conditions, including platelet deficiency disease and therapy-related infection.

Hardyston Township Brochure

Hardyston Township: Business and Family Friendly.

If you are looking for an ideal place to locate or re-locate your business, then welcome to Hardyston Township, NJ! With outdoor activities such as swimming, boating, fishing, hiking, hunting, skiing, and golfing, Hardyston Township offers an active, healthy, country lifestyle with good jobs and easily accessible nightlife, as well as stable taxes and a well-managed community. Our town is business friendly. Some towns make that statement, but are unable to produce. From the office of the Mayor and Town Council, to the land use boards, and the construction department, we stand ready to assist new business relocation to the township, and we are here to help!

How we can help

If you think your business would be a fit for our town, Economic Development Advisory Commission, along with the commission members, will do what it takes as we feel are necessary to help you through

"We are dedicated to providing the foundation for your child's life, love of learning." - Barbara Iglesias, Executive Director, Great Barrington Children's Learning Center
